

MITSUBISHI MOTORS PORTABLE SYSTEM

ESPECIALLY FOR YOUR MITSUBISHI COLT: Fully integrated widescreen navigation system with docking station

Pitty, no standard navigation system was built in to your Colt, but you can't do without the indispensable convenience of it. So now what? Disturbing wires throughout your new Colt and an ugly suction cup on your windscreen?

No need, since Mitsubishi introduces its **Mitsubishi Motors Portable System (MMPS)**.

This fully integrated 4.3" widescreen advanced navigation system is specially made for your Mitsubishi Colt and fits perfectly into your dashboard.

Mitsubishi Motors Portable System combines the advantages of an integrated navigation system and a portable navigation system:

- Because the navigation device can be placed in the **docking station**, the navigation battery is loaded automatically, eliminating the need for separate disturbing cables to work with.

- The Mitsubishi Motors Portable System uses the **speakers of the Colt audio system**, so the sound of the radio is automatically lowered if instructions are given on the driving route.
- The Mitsubishi Motors Portable System includes a **Bluetooth® car kit** making a hands-free phone call possible. The sound of the car kit is shown through the audio system. During the call, the sound of the radio is slightly muted, navigation guidance is muted completely.
- The navigation device can always be removed from the docking station, so you always can use the **navigation device in a 2nd car**. For this Mitsubishi Motors Portable System comes with an additional universal backpack so that it can be used directly.

The Mitsubishi Motors Portable System is based on a Garmin nüvi.
